

KWS Propower Hybrid Fall Rye is a very high biomass silage and forage variety. Developed for the dairy industry, it produces an excellent quality silage if cut before ear emergence and combined with corn silage. The variety has high whole-crop yields and can be used for grazing just as readily. KWS Propower has the best standability and, like all hybrid rye varieties has low input requirements due to improved nutrient and water uptake. KWS Propower is a strong competitor to weeds. Disease resistance, even to ergot, is very high.

Strengths:

- ✓ Up to 50% higher yields than traditional rye
- ✓ Up to 15% higher forage yields than other hybrid rye varieties
- ✓ Low ergot risk / Great disease package
- ✓ Excellent quality silage, forage, and feed
- ✓ High biomass production for biogas
- ✓ Very good lodging resistance
- ✓ Highly competitive
- ✓ Performs well under drought stress
- ✓ Dryland or irrigation
- ✓ Excellent winter survival
